Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Shirley E. Brown and Betty A. Barrett provide word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center.

DIGEST

U.S. Agricultural Exports Highest Since 1981 (see p. 2). The value of U.S. agricultural exports rose during the first 11 months of fiscal year (FY) 1989 (October 1988-August 1989) to \$36.6 billion, \$4.5 billion higher than during the same period in FY 1988, and its highest since FY 1981.

U.S. Sugar Quotas (see p. 6). The U.S. sugar import quota was raised in September due to a tight domestic market. Import allocations increased by 77 percent. However, the import period also increased from 12 months to 21 months. These changes are considered in a historical context of quotas since the 1930's.

U.S. Trade Benefits Economy (see p. 9). U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1988 stimulated another \$1.51 (an additional \$56.2 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 1,025,000 full-time civilian jobs, including 601,000 jobs in the nonfarm sector.

U.S. Agricultural Exports Highest Since 1981

The value of U.S. agricultural exports rose during the first 11 months of fiscal year (FY) 1989 (October 1988-August 1989). Export value reached \$36.6 billion, up \$4.5 billion from the same period in FY 1988 and the highest since FY 1981's \$40.6 billion. The export value was \$12.5 billion above the FY 1986 low, but it remained below record levels.

Bulk products have accounted for most of the change in U.S. agricultural exports during the past two decades. Between 1969 and 1981, bulk exports rose about \$27 billion. Between 1981 and 1986, bulk exports fell \$16 billion, then rose \$8 billion by 1989. Changes for high-value products during the same three periods were up \$11 billion, down \$1.5 billion, and up \$6 billion, respectively.

Bulk product exports during the first 11 months of FY 1989 were \$3 billion higher than during the year before. Drought-reduced production for U.S. and some competitor grains and oilseeds drove prices higher in 1989. The average price of U.S. wheat exports rose 48 percent in 1989, while corn and soybean prices increased about 25 percent. Export volume fell slightly, largely due to reduced wheat and soybean shipments.

Corn, Sorghum Nearly Offset Reduced Wheat and Soybean Exports

U.S. coarse grain exports rose 7.5 million tons in the first 11 months. Despite a drought-reduced harvest, U.S. exports of corn and sorghum grew as Soviet import demand rose and competitor production declined in the wake of drought. Foreign exporters generally do not hold extensive stocks and could not maintain shipments during 1989 by drawing on previous years' crops like the United States. The U.S. share of world trade and of Soviet imports rose in FY 1989, and increased volume added more than \$800 million to export value. Higher prices compounded the increase. Coarse grain exports were \$2.1 billion higher in FY 1989 compared with the same period in FY 1988.

U.S. wheat exports fell 3.4 million tons during the first 11 months of FY 1989. Shipments to the Soviet Union fell 3.7 million tons from their FY 1988 record of 8.8 million tons. Substantially higher prices, however, offset the volume decline for total wheat exports, causing value to rise \$1.4 billion.

Gains in the average export price of wheat substantially outpaced gains for other drought-affected commodities in FY 1989. Wheat exports benefited from higher market prices and smaller export bonuses under the Export Enhancement Program (EEP). The EEP has been primarily aimed at countering European Community (EC) export subsidies, and as drought drove world prices closer to EC support prices, EC subsidies shrank, permitting a decline in EEP bonuses. Despite this gain, wheat export prices averaged 14 percent below 1981 levels.

U.S. soybean exports fell 6.6 million tons, and soybean meal exports fell 1.3 million tons. In each case, lower volume offset higher prices, and bean and meal exports together fell \$912 million. Most of the decline occurred in sales to Western Europe, which fell \$690 million, but shipments to virtually every other destination were lower as well. Exceptions were Algeria, which purchased slightly more U.S. soybean meal than in 1988, and Mexico, which purchased more U.S. soybeans and soybean meal.

High-Value Product Exports Continue Growing in 1989

High-value exports climbed \$1.9 billion from the same period a year earlier, compared with a \$2.6-billion gain in 1988 and a \$1.2-billion rise in 1987. Animal products accounted for the largest share of this gain, growing \$600 million in 1989. Animal product exports also achieved the largest gains among high-value products in 1987 and 1988.

Much of the growth in U.S. animal product exports in recent years resulted from rising imports by Mexico and Japan. Because of lower sales to other destinations, the increase in U.S. animal product sales to Mexico and Japan alone in 1989 exceeded the total gain for the commodity group. Japan and Mexico accounted for about 80 percent of a \$1-billion increase in 1988.

The value of U.S. animal product exports to Japan grew \$400 million during the first 11 months of FY 1989, largely because of expanded beef sales. U.S. beef did extremely well in the Japanese market, continuing to gain market share at the expense of Australian beef. U.S. pork exports to Japan also rose, despite some loss in market share due to rebounding Taiwanese shipments. Japan's total pork imports increased sharply as Japan's pork production fell. U.S. poultry meat exports to Japan grew \$20 million, ex-

ceeding last year's record, because of continued strong Japanese demand and reduced Japanese production.

Export growth to Japan was facilitated by a 1988 agreement to raise Japan's quotas for beef imports 60,000 tons, annually, and by Japan's tariff reductions for poultry imports. However, liberalization was not the only factor. In addition to increased beef sales under quotas, U.S. exports of nonquota beef to Japan also increased.

Japan's meat imports from all sources have been growing strongly in recent years in response to the increase in the value of the yen. A strong currency helped reduce the local cost of many imported goods in Japan, but the cost of importing meat fell faster than the cost of producing meat. Japan imports almost all of its animal feed, but marketing arrangements, including price stabilization, prevented a complete transmission of potential yen-price reductions. Also, importing meat permitted the industry to import the product of nontradable inputs, like labor, for less than purchasing them in Japan.

The impetus behind increased Mexican imports of animal products and other agricultural goods during

1988 and 1989 came from efforts to reduce inflation. Unlike Japan, Mexico's income and currency changes have not been encouraging for imports. In December 1987, the Mexican Government announced its Economic Solidarity Pact, promising to control food and other prices in exchange for wage restraints. This program was subsequently extended through March 1990.

The availability of livestock products, however, declined when Mexican producers withheld supplies because of price controls. As a result, part of the government's strategy to control inflation included importing food products to continue holding down domestic prices and prevent shortages. Food items under price controls included milk, eggs, beef, corn tortillas, and wheat bread, and U.S. exports to Mexico of many of these products increased significantly in 1989. Shipments of other products also rose as a more liberalized Mexican trade regime encouraged agricultural imports. The substitution of tariffs for import license requirements increased the access to foreign products in Mexico, and U.S. agricultural exports to Mexico rose \$1 billion during the first 11 months of FY 1989. (Stephen MacDonald, Commodity and Trade Analysis Branch)

Agricultural Imports Maintain Record Pace

U.S. agricultural imports for October 1988-August 1989 amounted to \$19.9 billion, \$558 million ahead of last year's record pace. Based on those numbers, the import forecast for FY 1989 was raised \$500 million above last year's total to a record \$21.5 billion. Imports of fruits and vegetables showed the most significant change, forecast to increase \$600 million over FY 1988. Grains, sugar, and rubber are also well ahead of FY 1988's pace.

U.S. Sugar Quotas

Quota Allocation Raised for 1989/90

On September 12, 1989, Agriculture Secretary Clayton Yeutter announced an increase in the United States import quota on sugar from 1,125,255 tons to 1,986,950 tons, an increase of 77 percent.¹ This increase was prompted by short-term tight market conditions in the United States. At the same time, however, he also announced that the quota year would be extended 9 months to September 1990. So, instead of 1,125,255 tons shipped over 12 months (an average of 94,000 tons a month), the United States will import 1,986,950 over 21 months (95,000 tons a month). The current quota (with the increase) comes to 1,032,447 tons for FY 1990 (see table 5), compared with 1,212,900 tons in FY 1989, 792,000 tons in 1988 and 1,107,700 tons in 1987.

Market conditions (supply and demand) had shifted to a point at which the earlier quota produced a price of over 24 cents a pound in early September, more than 2 cents above the market stabilization price established for 1988/89.² One way to reduce prices to the support level was to increase the quota. The quota had been increased in July 1988 after the drought reduced U.S. production and the price reached nearly 24 cents a pound.

Table 5 shows four periods of data. The first period shows imports for 1981, unrestricted by quotas, and also indicates import levels before quotas were reimplemented in 1982. The second column shows quota levels, announced on September 12th, that cover the January 1989-September 1990 period. The third column shows imports reported for January 1-September 30, 1989, and prorated through September 30, 1989. The fourth column, a residual, shows the implied quota for FY 1990. The use of import quotas to limit foreign sugar coming into the United States originated in the 1930's.

Evolution of U.S. Sugar Quotas

U.S. sugar quotas have gone through four distinct periods since they were first used under the Sugar Act of 1934:

1 Unless otherwise noted, tons refer to metric tons. One metric ton equals 2,204.622 pounds.

2 New York, duty-paid.

1934-60

The original allocation of quotas in 1934 was as follows:

	<u>Percent</u>
Cuba	29
U.S. mainland beet sugar	24
Philippines	16
Hawaii	14
Puerto Rico	12
U.S. mainland cane sugar	4
Other	<u>1</u>
Total	100

Quotas applied not only to foreign imports but to domestic production. The Virgin Islands and all other countries were allocated less than 1 percent. The U.S. mainland received 28 percent of the quota. The Philippines were a protectorate. Hawaii and Puerto Rico were territories at that time.

1960-74

President Eisenhower placed an embargo on imports from Cuba beginning in 1960, thereby prohibiting sugar imports from that country. Cuba had accounted for 70 to 75 percent of U.S. sugar imports in the late 1950's. During the early 1960's, other countries filled the large supply gap. Country-by-country import quotas were set each year and adjusted to compensate for shortfalls. Also, during this period, domestic cane and beet sugar production increased substantially.

1975-81

A global import quota of 6.4 million tons was reimposed in 1975 but was set so high as to be, in effect, non-restrictive. A global quota meant that total imports, regardless of supply source, could not exceed a certain amount. However, since U.S. sugar import requirements were always less than 6.4 million tons, the quota meant little. Domestic production quotas were no longer in effect.

1982-89

Individual country-by-country quotas were imposed in May 1982. By then, the world price of sugar had fallen so low that duties and fees, which were subject to statutory limits, could no longer defend the U.S. sugar support price.

Effect of Quotas

While quotas can control the supply of sugar (foreign and domestic) more effectively than a tariff, quotas can

also reduce the world price. Since U.S. demand is large enough, a reduction in the U.S. quota reduces the world price. (Stephen R. Milmo, Commodity and Trade Analysis Branch)

Are we approaching a world food crisis again?

That's the question addressed in a new report from the Economic Research Service. The question is raised by a confusing array of facts. Most of the world's good farmland is already in production, nearly all the available irrigation water has been tapped, and groundwater supplies are shrinking. **If world population stabilizes sometime around the end of the next century (as currently projected), the world should have enough nonrenewable resources, such as land, water, and energy, to feed a growing population at a gradually improving standard of living.** But these resources are unevenly distributed, resulting in often prolonged, though localized, shortages. And although world food production per capita continues to increase, it's doing so at a slower rate.

Order your copy of this vital report now. With it you can sort out and put into perspective the recent spate of "no-hope, new-hope" news articles on our world's potential to feed itself.

Read the recent special issue of World Agriculture, an ERS publication... In a scholarly 75 pages by its own specialists, it tackles such subjects as "Famines Past and Future's Future" ... "Environmental Degradation of Agriculture" ... "Climate Change and Agriculture" ... "Short-Term World Food Security" ... "Technology: Are We Running Out of Steam?" and more.

U.S. Trade Benefits Economy

U.S. agricultural export value increased in 1988 for the second year in a row. This was an important event. Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 79 percent of its wheat, 55 percent of its rice, 34 percent of its soybeans, 43 percent of its corn, and 41 percent of its cotton in FY 1989 (October 1988-September 1989).

These exports generated increases in employment, income, and purchasing power in the farm and nonfarm sectors. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural exports peaked in 1981 at \$43.3 billion after years of steady growth but declined 33 percent by 1986. Agricultural exports rose in current dollar values in 1988 to 1984 levels. In 1981, bulk and processed agricultural exports provided employment for 1.2 million workers. Agricultural exports nearly regained that level, reaching 1 million workers in 1988. Exports in 1981 generated slightly more than \$100 billion in business activity, \$43.3 billion for exports, and \$63 billion for supporting activities. Exports generated \$93.3 billion in business activity in 1988: \$37.1 billion for exports and \$56.2 billion for supporting activities. Thus, each dollar received from agricultural exports stimulated another \$1.51 of output in the U.S. economy, a multiplier effect of more than 2. Net exports in 1988 contributed \$16 billion to the U.S. trade balance compared with \$8 billion in 1987.

Exports Generate Added Business Activity

The United States exported \$37.1 billion of agricultural products in 1988. The value of exported raw products was \$17.5 billion; processed commodities, \$13.9 billion; and transportation and trade services for raw and processed products, \$5.7 billion.

The \$56.2 billion in 1988 supporting activity included \$9.9 billion from the farm sector, \$4.6 billion from the food processing sector, \$17 billion from other manufacturing sectors, \$6.8 billion from trade and transportation, and \$17.7 billion from other services. Nonfarm sectors of the economy received about 82 percent of the additional economic activity.

Jobs For 1,025,000 Workers

U.S. agricultural exports supported an estimated 1,025,000 full-time civilian jobs in 1988. More than 424,000 U.S. farmworkers, 13 percent of the farm labor force, worked in the production of export commodities.

In addition, 601,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 70,000 of these were in food processing, 226,000 were in trade and transportation, 112,000 were in other manufacturing sectors, and 193,000 were in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for \$18.1 billion, or 49 percent, of the \$37.1 billion in agricultural exports in 1988. Bulk exports, however, had a smaller proportional effect on the nonfarm economy. Direct bulk exports generated an additional \$23 billion of business activity (\$1.27 additional output per dollar of bulk exports compared with the \$1.51 for all agricultural exports). The business activity was distributed differently across economic sectors (4 percent to farming, 39 percent to manufacturing, 45 percent to other services, and 12 percent to wholesale trade and transportation) than the additional business activity for all agricultural exports (18 percent to farming, 38 percent to manufacturing, 32 percent to other services, and 12 percent to wholesale trade and transportation). Of the 1,025,000 jobs related to U.S. agricultural exports, 492,000 (48 percent) supported bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to nearly \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports partially offset a \$145-billion deficit in nonfarm trade in 1988, leaving the U.S. trade balance in deficit by \$129 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$20.9 billion in agricultural commodities in 1988. Some \$6.3 billion of this total was spent on items, such as bananas, coffee, and tea,

that did not compete directly with U.S. agriculture. The balance of \$14.7 billion was spent on imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that competed with U.S. products.

Since 1970, noncompetitive farm product imports have been growing at an annual rate of about 5.8 percent. Competitive agricultural imports have grown annually by 7.7 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, we estimated that the equivalent domestic output effect of the \$14.7 billion of competitive imports in 1988 at \$38.8 billion. That is, each dollar spent on imports would have required roughly another \$1.64 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.64.

Agricultural Trade Benefits U.S. Economy

Almost all of the direct benefit comes from bulk agricultural exports. The port value of other agricultural exports and imports just about offset each other (table 6). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide 1988 net business surplus for agricultural trade was an estimated \$48.2 billion, a result of \$93.3 billion of total output generated by farm exports minus \$45.1 billion of agricultural imports (including noncompetitive imports).

U.S. agricultural trade stimulates most sectors of the economy. The farm sector's \$27.4 billion of output associated with agricultural exports more than offset the \$9.3 billion of farm output implicitly lost because of competitive agricultural imports. The food processing sector gained \$4.9 billion in total output, about 13,000 jobs, and \$402 million in income.

U.S. agricultural trade benefited the processing of meat, grain, fats and oils, and miscellaneous foods. Agricultural trade did not benefit sugar mills, dairy plants, canners, freezers and dehydrators, beverage and flavoring makers, and confectioners and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$4.9 billion from agricultural trade and a net increase in output of \$31.5 billion after considering the domestic output lost to competitive agricultural imports.

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1988 generated \$2.51 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.¹ Thus, the \$37.1 billion of agricultural exports in 1988 generated \$93.3 billion of total economic activity but \$37.1 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The share of total income attributed to agricultural exports and competitive imports to the nonfarm and non-food processing sectors of the economy in 1988 was each nearly 63 percent. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 29 percent of its total income from agricultural exports, while the food processing sector received 8 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with each assuming about 20 percent, reflecting the greater importance of processed food products in the competitive import bill of goods. (William Edmondson, National Economy and History Branch, Agriculture and Rural Economy Division)

¹ This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional income, our estimates of the economywide influences of agricultural trade are conservative.

Table 6--U.S. economic activity triggered by agricultural trade

INDEX OF APPENDIX TABLES

Exports

Table		Page
A-1	U.S. agricultural exports: Quantity and value by commodity	A-2
A-2	U.S. agricultural exports: Quantity, value, and unit value by commodity and country, October-August 1987/88 and 1988/89, and August 1989	A-5
A-3	U.S. wheat exports: Quantity (1,000 MT) by destination, October-August 1987/88 and 1988/89	A-65
A-4	U.S. coarse grain exports: Quantity (1,000 MT) by destination, October-August 1987/88 and 1988/89	A-66
A-5	U.S. soybean exports: Quantity (1,000 MT) by destination, October-August 1987/88 and 1988/89	A-67
A-6	U.S. agricultural exports: Value (1,000 dol.) by destination, October-August 1987/88 and 1988/89	A-68

Imports

B-1	U.S. agricultural imports: Value (1,000 dol.) by country of origin, October-August 1987/88 and 1988/89, and August 1988 and 1989	B-1
B-2	U.S. agricultural imports: Quantity and value by commodity	B-2
B-3	U.S. agricultural imports: Quantity, value, and unit value by commodity and country, October-August 1987/88 and 1988/89, and August 1989	B-4

Prices

C-1	Foreign currency units per U.S. dollar	C-1
C-2	Domestic and foreign wheat prices	C-2
C-3	Corn, sorghum, rice, and cotton prices	C-2
C-4	U.S. and Northern European soybean and product prices	C-3
C-5	U.S. import prices	C-3
